## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U. S. Patent No. 5,027,212 (Marlton et al.).

As to claim 1, Marlton et al. teaches a preamplifier circuit (Unit 252 in Figure 15) for transmitting an analog video signal (Unit 170 in Figure 12 and Figure 15) as a result of converting a digital video signal outputted from a computer (Unit 18 in Figure 2) (Column 4, lines 16 – 20) by a D/A converter (Units 154 in conjunction with 164 in Figure 12) to a display (Unit 14 in Figure 2).

Marlton et al. also teaches the input characteristics of said preamplifier circuit (Unit 252 in Figure 15) is current input (Unit 170 in Figure 15) to match a characteristic of current output (Unit 170 in Figure 12) of said D/A converter circuit (Units 154 in conjunction with Unit 164 in Figure 12). Signal 170 in Figure 12 outputted from the D/A converter circuit (Units 154 in conjunction with Unit 164 in Figure 12) is directly connected to the preamplifier (Unit 252 in Figure 15), therefore the current characteristics of signal 170 in Figure 12 must match the current characteristic of signal 170 in Figure 15.

As to claim 2, Marlton et al. also teaches a current conversion circuit (Unit 252 in Figure 15) using a transconductance amplifier is provided within said preamplifier circuit (Unit 252 in Figure 15).

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 4,782,290 teaches a D/A converter that feeds a video signal to an amplifier that outputs a current that is controlled by a reference current. U.S. Patent No. 4,547,797 (Mick) teaches a D/A converter that feeds a current to an amplifier for display. U.S. Patent No. 4,591,828 (Storey) teaches a data processor that has a a transconductance amplifier and a D/A converter wherein the D/A has matching current characteristic as the transconductance amplifier.
